

5. (amended) An arrangement as claimed in claim 1, characterized in that said signal generator is adapted to generate said control signal in accordance with a predetermined transmission protocol, said code data output unit being adapted to include an identifier, which identifies said transmission protocol, into said subset.

6. (amended) An arrangement as claimed in any claim 1, characterized in that the first and the second electronic device are the same.

7. (amended) A remote control device forming part of an arrangement as claimed in claim 1, said remote control device having a first memory for storing a set of code data for controlling a first electronic device, which first memory is connected to an input of a signal generator to supply said code data to said input, which signal generator is adapted to generate, on the basis of said code data, control signals for controlling said first electronic device, and to transmit said control signals to said first electronic device, said first electronic device having a data input arranged to receive data from said remote control device, characterized in that said remote control device has a code data output unit connected to said first memory, said code data output unit having a further input for receiving an upload signal and being adapted to read, under control of said
